PROJECT 3 · FINAL PRESENTATION

Procurement Risk & Mitigation Agent

Market news + company contracts → a checked risk report

Sabrina Urriola · Food manufacturing · Built with LangGraph

WHY · THE PROBLEM

The problem, and who has it

WHO

Procurement manager at an industrial bakery

Buys sunflower oil, wheat, sugar, etc. Demo company: Bakery Foods Inc. (fictional).

WHAT THEY DO TODAY

Reads news, then checks contracts by hand

Repeated before each buying decision.

THE PAIN

Cost exposure and risk of production stops

Uncovered volume is bought at spot prices.

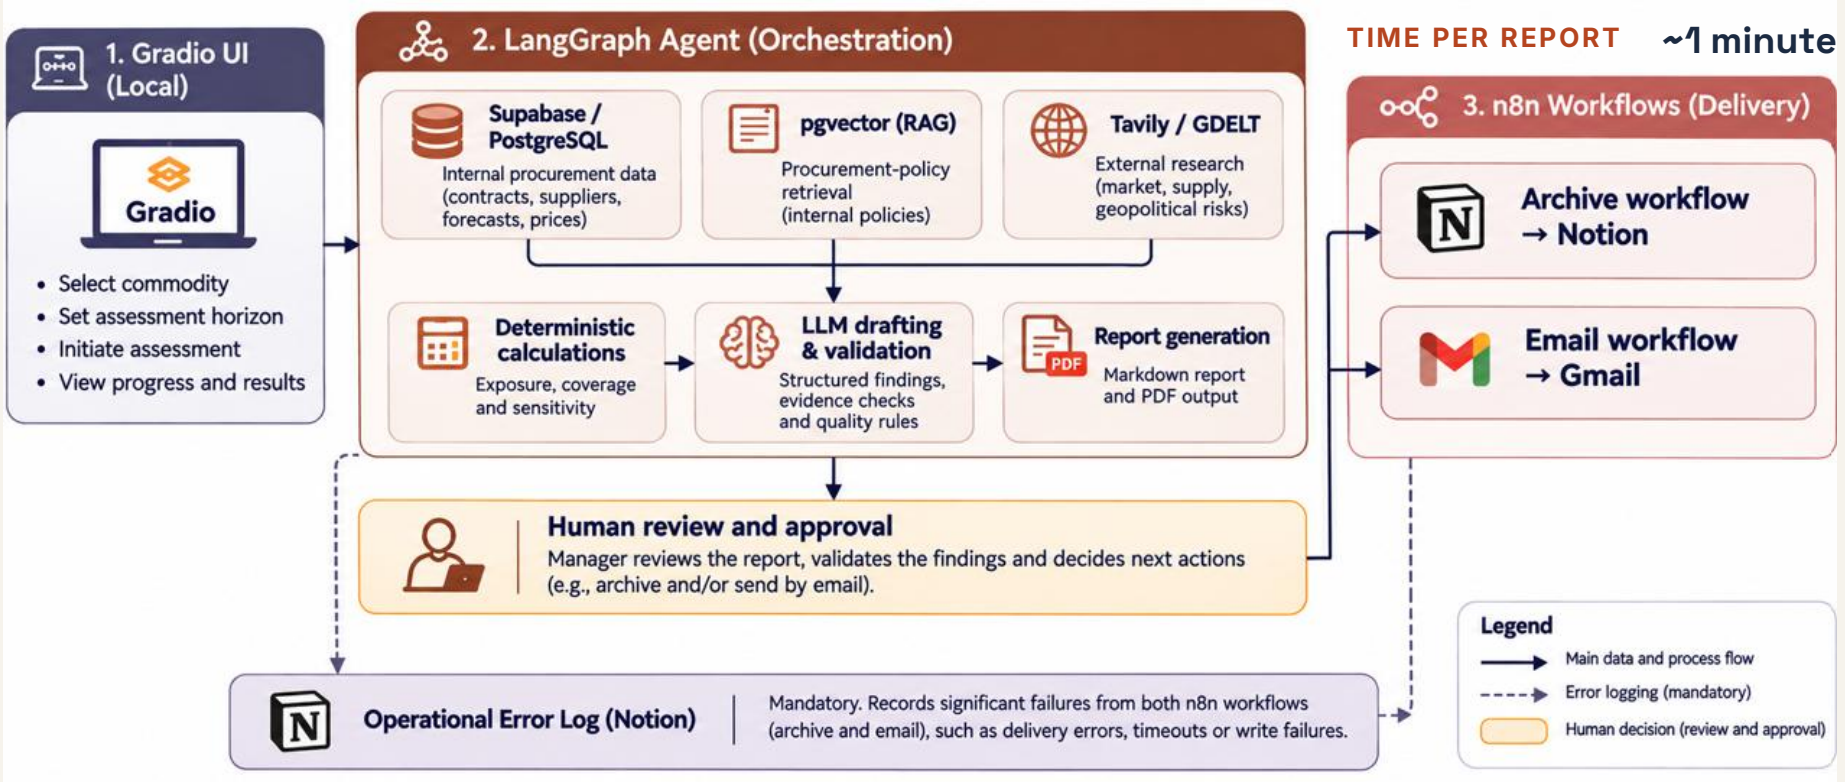

A missed signal can mean higher costs or a stopped line.

How it works

Market news and company data go in; a risk report with sources comes out.

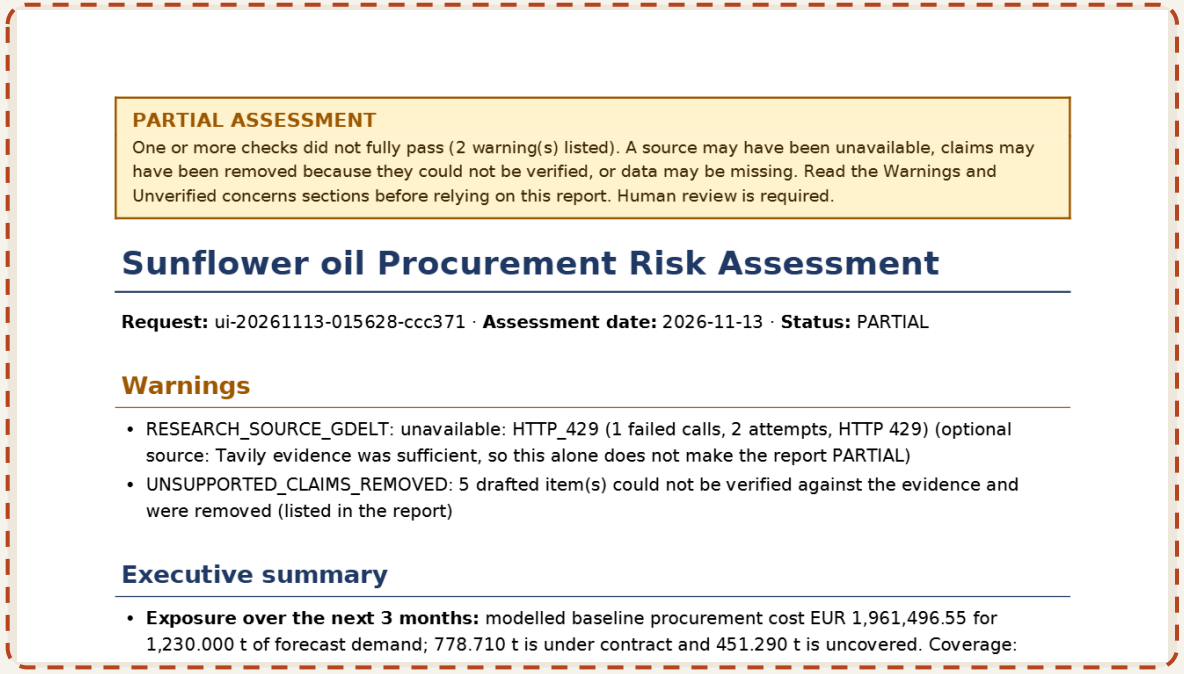

Under the hood – How it's built

Why LangGraph: LangGraph lets us control the agent's research loop and writing loop, which would be harder and easier to break in n8n.

SO WHAT · THE RESULT

What the user gets

PARTIAL ASSESSMENT
One or more checks did not fully pass (2 warning(s) listed). A source may have been unavailable, claims may have been removed because they could not be verified, or data may be missing. Read the Warnings and Unverified concerns sections before relying on this report. Human review is required.

Sunflower oil Procurement Risk Assessment

Request: ui-20261113-015628-ccc371 · **Assessment date:** 2026-11-13 · **Status:** PARTIAL

Warnings

- RESEARCH_SOURCE_GDELT: unavailable: HTTP_429 (1 failed calls, 2 attempts, HTTP 429) (optional source: Tavily evidence was sufficient, so this alone does not make the report PARTIAL)
- UNSUPPORTED_CLAIMS_REMOVED: 5 drafted item(s) could not be verified against the evidence and were removed (listed in the report)

Executive summary

- **Exposure over the next 3 months:** modelled baseline procurement cost EUR 1,961,496.55 for 1,230.000 t of forecast demand; 778.710 t is under contract and 451.290 t is uncovered. Coverage:

Every claim needs a quote from a source.

What each status means

COMPLETED: all checks passed, assessment finished with usable evidence and valid output.

PARTIAL: usable, but report produced with warnings or some missing evidence.

FAILED: no valid report could be produced ; nothing is archived

Main sections:

Executive summary

Financial exposure

Risks

Mitigation options and recommended next steps

Alternative-supplier leads (unverified)

Evidence register (sources)

HOW · LIVE DEMO

See it work.

Sunflower oil, 3 months → a risk report in Notion

1

Start it

Sunflower oil,
3 months horizon

2

Show it run

Research, checks, then the draft

3

Open the report

Exposure, risks, actions

4

Prove it

Click one source link

SCOPE · LIMITATIONS

DATA

Company data and policies are fictional

Contracts, forecasts and policies are synthetic. Policies are context, not proof of real compliance.

EXISTING SUPPLIERS

No public-news monitoring of existing suppliers

They are fictional, so real events (a divestment, a new plant, a new CEO) cannot be found.

EVIDENCE

Web evidence can be incomplete or biased

Search results may be outdated; material claims need a human check.

NEW SUPPLIERS

Alternative suppliers are unverified leads

Real companies found by search; a person must qualify them before any contact or order.

NEXT · GO-TO-MARKET

What’s next: go-to-market sprints

Sprint	Goal & audience	How we reach them	Deliverable	Success metric
1	Learn: 12 buyer interviews at food makers	LinkedIn and industry groups	Sample report + findings note	6 of 12 say it would change a decision
2	Trust: 3 buyers share anonymised data	Follow-up calls with Sprint 1 leads	Report on their own data	2 of 3 confirm the exposure figure
3	Pilot: 1–2 teams for 6 weeks	Sponsors from Sprint 2	Weekly report + one-page offer	1 team stays; 1 names a price

All targets are hypotheses, not results.

Thank you.
